

In Building Services

You need to make your in-building coverage project a success!

Take advantage of **V-COMM's** extended services including Design-Build and Turnkey Services. **V-COMM's** "Virtual Engineering" services and experienced staff provides total end-to-end project services to meet your network's performance requirements and ensure success.

We design carrier class systems and solutions that are versatile, reliable, and serviceable. Regardless of venue, **V-COMM** has the expertise and resources to ensure new services and coverage operate as predicted.

Turnkey Services

- Design-Build
- Project Management
- Construction Management
- Distributed Antenna System (DAS)
- Leaky Feeder Operating Systems
- Fiber & Radiax Installation & Certification
- Coverage Measurement & Verification Post-deployment
- System Traffic & Capacity Engineering
- Outside Plant Design
- Mechanical Design
- Electrical Design
- System Specifications
- System Integration
- Infrastructure Planning
- Design & Testing Services
- In-building Systems
- Link Budget Analysis
- Bill of Materials
- Installation
- Documentation
- Carrier Interconnect
- Power Management
- Upgrades

V-COMM has provided design and testing services for a wide variety of in-building systems, from small commercial office buildings to major office towers. Our services have included in-building antenna system design with distributed discrete antenna system (DAS) design in addition to leaky feeder design with link budget analysis to support multiple carriers, technologies, and venues.
